Protect your trees from insects and disease!

Think your trees may
already have a
problem? Call us
today For a property
assessment!

Additional services

Root collar excavation and soil rejuvenation

Using our air spade, our arborists will work to de-compact the soil in the critical root zone of your trees and implement custom soil amendments and fertilizers to match your plants' deficiencies.

Trunk injection and systemic treatments

Insect pests and disease can be devastating to landscape trees. Our specially formulated trunk injection and bark spray treatments are a perfect line of defense against attackers like scale insects, Oak Wilt, and Spotted Lantern Fly.

Resistograph testing

\$500-\$750 based on trunk diameter

Concerned about the stability of your tree and its trunk? Our arborists can use industry leading technology and tests to inspect your trees.

Why have our arborists take care of your trees?

- 15% discount on all tree trimmings and removals with annual membership!
- Well maintained, healthy trees provide habitat for native wildlife, beautify landscapes and can increase property value
- Green spaces and the presence of healthy mature trees have shown to substantially reduce stress and reduce risk of disease.
- Mature trees can reduce cooling costs in the summer and decrease the risk of flooding. A mature ash tree can take up over 2,300 gallons of water per year!

Plant Growth Regulation

Our team can help you to lower your trimming frequency and help your trees stay healthier and beautiful for longer.

Soil Content & pH Analysis

We offer custom soil analytics in partnership with soil and plant research laboratories to help you get exactly what your plants need!

About Us

Greater Pitt Plant Healthcare provides a variety of custom services to meet your tree and shrub care needs. Our expert team of certified arborists and PHC professionals are dedicated to maintaining healthy and beautiful landscapes using cutting edge treatments designed to improve plant health while minimizing environmental impact.
